Subject: Physical Profiles of HRM Lakes

Nov. 16 / 01

Dear Mr. Mandaville,

I'm an engineering assistant for HRM's Environmental & Right-of-Way Services, Dutch Village Road. I work under John Sheppard and Naipal Tomar. I went to the Limnology web-site and was not able to download any information because I don't have Excel software on my computer. What I'm interested in is the volume (in gallons or cubic meters) of the lakes in HRM, particularly those that we have pumping stations on. I want to construct a table of these various lakes so we can quickly determine a dilution factor in case there is a sewage spill. This is necessary to determine what the impact is. Is there anyway I can obtain this information? Any help would be appreciated. Thank you.

Regards, Clark
